Prerequisites (pre-test)

Background in math, CS and programming is required for this course.

A quick self-monitored pre-test (15-20 mins should be enough to do it)

1. Show you the mathematical background expected and your readiness for this course.
2. Show you what you need to brush up on. Questions about these math operations will not be answered by either Professors or TAs, we expect you to know this stuff.

Discrete Math

$\mathbf{A} \mathbf{b} =$

Q10: Using matrices, express the solution to the following system of equations:

$3x_1 + 2x_2 - 1x_3 = 10$, $2x_1 - 10x_3 = 0$, $-9x_1 + 9x_2 = -1$. (Form the system, but do not solve).

Introduction to Computer Graphics

What is Computer Graphics?

Computers:

accept, process, transform and present information.

Computer Graphics:

accept, process, transform and present information
in a visual form.

Ok but... what is the course really about?

The science of turning the rules of geometry, motion and physics into (digital) pictures.

What its not about?

Photoshop, AutoCAD, Maya, Blender, Renderman, Graphics APIs.

“Core” Areas of Computer Graphics

- Form (modeling)
How do we represent (2D or 3D) objects & scenes?
How do we build these representations?
- Function, Behavior (animation)
How do we represent the way objects move?
How do we define & control their motion?
- Appearance (rendering)
How do we represent the appearance of objects?
How do we simulate the image-forming process?
